

FOOD GRADE LUBRICANTS THAT WON'T EAT UP YOUR PROFITS.

Whitmore's high-performance and safe food grade lubricants line, Medallion,[™] is highly recommended for industrial applications where lubricants may have incidental contact with edible products. All Medallion products are NSF H-1 approved and authorized to be used in food processing plants worldwide. Medallion FM Grease, Hydraulic, Penetrating Chain and Gear Oils are produced under the supervision of Dallas Kosher and are considered Kosher-Pareve for year-round use including Passover.

HIGH PERFORMANCE LUBRICANTS

Our Premium Medallion™ products are blended with a base oil called Excelsior™. This base oil is ideally suited for use in applications involving food equipment. Excelsior is colorless and free of potentially hazardous contaminants. While most other base oils used in industrial lubricants are yellow or amber in color; this discoloration is caused by a variety of impurities including traces of sulfur, nitrogen, and inferior aromatic oils. In laboratory tests, Whitmore's Excelsior base oil shows a major reduction in evaporation loss. Oxidation stability exceeds that of conventional base oils by 60-100%. These performance improvements translate into reduced carbon and varnish deposits; resulting in longer oil and equipment life.

Medallion FM Grease

An extreme pressure versatile grease that may be used to lubricate bearings, bushings, slides, rollers and cam followers. Medallion FM Grease can also be used as an anti-rust film and as a release agent for gaskets and seals. Its water-resistance minimizes the loss of lubricant while the anti-wear additives protect metal surfaces from wear under conditions of metal-to-metal contact. This adhesive and cohesive grease resists being pounded out of bearings and bushings under shock load. Medallion FM Grease can be used down to -25°F (-32°C) and can withstand 300°F (155°C) with daily re-greasing.

Grades: 0, 1, 2

Packaging: Pails, Kegs, Cartridges (50 per case), Drums

Medallion FM Hydraulic Oil

Medallion FM Hydraulic Oil is ideally used in areas where a nontoxic oil is required. It is recommended for high-pressure hydraulic systems, as well as bearing lubrication wherever there is a chance of incidental contact with edible products.

Grades: ISO 32, 46, 68, 100

Packaging: Pails and Drums

Medallion FM Gear Oils

Medallion FM Gear Oils contain anti-wear additives to protect metal surfaces and reduce downtime due to component failure. Ideal applications for this product include worm gear drives, oiled bearings, couplings and parallel-shaft gearboxes.

Grades: SAE 80W-90, 85W-140, ISO 680, 1000

Packaging: Pails and Drums

Medallion White Anti-Seize

A premium quality assembly paste that provides excellent protection from seizure, galling, rust and corrosion. Medallion White Anti-Seize protects metal surfaces from wear due to vibrations that can occur under static contact conditions. This protective coating is effective at temperatures as low as -65°F (-54°C).

Grade: 1.5

Packaging: Brush Top ½ and 1 lb. Cans- 12 cans/case

Medallion Penetrating Chain Oil

A multi-purpose, light lubricating oil which can be used as a lubricant, penetrating oil and anti-rust film on equipment and parts where there is possible contact with edible products. Ideal for use on conveyor chains operating at temperatures from -40°F (-40°C) to 180°F (80°C).

Grade: 32

Packaging: Pails and Aerosols (Bladder and Non-Bladder) - 12 aerosols/case

Medallion Synthetic Air Compressor Oil

Fully synthetic lubricants formulated using the finest PAO (polyalphaolefin) base stocks available. Medallion Synthetic Air Compressor Oil is ideal for all types of air compressors, whether rotary screws, centrifugal or reciprocating compressors. It reduces varnish and sludge, and allows for longer periods of time between oil changes. Capable of sustaining a maximum continuous operating temperature of approximately 400°F (200°C). This product is also suitable for use on conveyor chains and other open lubrication points operating at high temperatures.

Grade: 32, 46, 68, 100, 150

Packaging: Pails and Drums

- **Contains an NSF-approved preservative**
- **Minimize downtime**
- **Lower operating costs**
- **Longer lasting equipment life**
