

OVERVIEW:

Water is oftentimes greater than 96% of a fluid system. Our advice? Boost it, then mix it. Using pH Boost will improve the properties of makeup water by adjusting the pH and tying up harness minerals. Managing both of those qualities will improve the overall performance of your drilling fluid system.

Advantages of using pH Boost:

- Adjusts the pH of your make up water (ideal pH range is 8.5-9.5)
- Enables better performance from bentonite and specialty additives

DOSAGE:

Add 0.5-1.0 lb. per 100 gallons of water with tank agitating. Can be added via venturi or through top of tank

PACKAGING:

5 lb resealable EZB or 5 gallon bucket (40 lbs)
